Anti-Enigma

ABSTRACT

- **Introduction:**

Something which is mysterious is defined as enigma. In 2018, There was a cyber apocalypse which threatened Jeff Bezos, CEO of Amazon. What happened was a small malicious file placed under a media file upon downloading transferred all his data illegally. These kind of acts by hackers place the civilians in peril. In this regard, our project Anti-Enigma(helps to crack mysterious threats found) aims to develop a small-scale user interface which analyses such malware and take required action to shield the data at utmost level of securities.
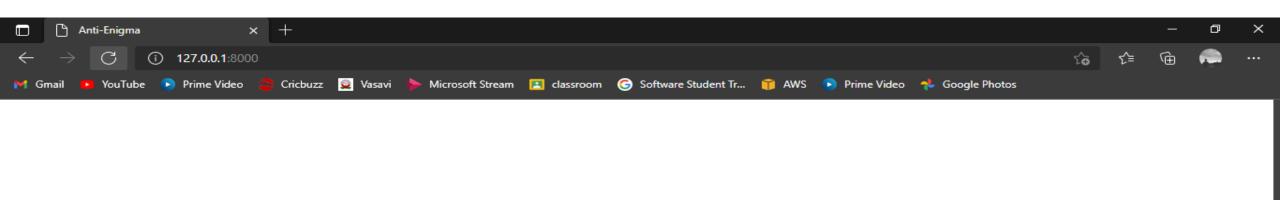

- **Description:**

The project is done using python language. When the user is suspicious of any file that is if it seems to malicious then he uses this entity to check it and the server detects the threats that is if it is encrypted or not.

- **Working:**

- The user gets to access the website only through login system and hence credentials of his account are not required.

- Upload the file which seem to be malicious into the drop-down box.

- The result is displayed on the screen if any threat is found but the details of that particular threats is confidential hence it is emailed or sent as message to private number of the user.

- All the users data is stored and protected.
